

*Now organised and run by the Association
of CDM Co-ordinators (as a one day course)*

AcPC 3
Construction
(Design & Management)
Regulations 2007

With so many Construction Work Projects lasting more than 30 working days, especially smaller projects, in construction, demolitions, maintenance, and repairs etc. the problem of employing outside Consultants to notify HSE and act as Co-ordinator, as required by Law, can be costly.

Why not train your own Employee who with CDM knowledge could become competent to take up the 'in-house' role of CDM Co-ordinator.

The Association is introducing a CDM Certificate for all would be Co-ordinators.

ASSOCIATION *of* CDM CO-ORDINATORS

Passing this Certificate will enable employees, with basic Health and Safety knowledge, to gain further competency to seek and practise as 'in-house' CDM Co-ordinators.

With the backing of the Association such employees can take the first step towards CDM capability in the construction industry.

The Association will advise and act as a back up for all would be 'in-house' CDM Co-ordinators on their first small project.

Every project lasting more than 30 working days must have a CDM Co-ordinator.

As CDM Co-ordinators are required on so many projects, both small and large, it is essential that all clients, principal contractors and contractors are aware of the need to appoint 'in-house' or Consultant.

CDM CO-ORDINATORS

**The CDM Certificate will be a one day course
and attract 5 CPD points**

ASSOCIATION of
CDM CO-ORDINATORS

14.40 - 15.40	Workshop & Assessment
15.40 - 16.00	Questions & Close

ASSOCIATION *of*
CDM CO-ORDINATORS

**European/British Criminal Law
Health & Safety Regulations**

Everyday tens of thousands, in fact, millions of **Notifiable Construction Projects** are started either in a Clients office or on site.

A **Notifiable Project** is any construction work lasting more than **30 days**.

Construction work includes construction, alterations, conversions, fitting out, renovations, extensions, repairs, redecorations, maintenance etc.

A CDM Co-ordinator can be anyone in the Construction Industry who is competent and capable with enough evidence to show that they meet the Health and Safety Standards of CDM Regulations 2007, taking into account the nature of the project and the risks involved.

Competency is still the foundation for risk management.

Another main proposal is that only relevant information is to form the basis of health and safety plans and risk assessments. Generic documents are not acceptable.
